The application has been amended as follows:

IN THE CLAIMS:

1. A method of determining a level of toxicity of a chemical compound comprising:
 - a) culturing cells in the presence of a plurality of concentrations of said chemical compound;
 - b) measuring a first indicator of cell health at four or more concentrations of said chemical compound;
 - c) measuring a second indicator of cell health at four or more concentrations of said chemical compound;
 - d) measuring a third indicator of cell health at four or more concentrations of said chemical compound;
 - e) determining the level of toxicity of said chemical compound from the measurements taken in steps (b), (c) and (d) by
 - i) performing a dose response analysis of for each indicator of

cell health from the measurements taken in steps (b), (c) and (d);

ii) identifying, from the dose response analyses, the highest concentration of said chemical compound at which no measurable toxic effect was observed for each measured indicator of cell health;

iii) selecting, as the toxic concentration (Ctox), a concentration less than or equal to the highest concentration of said chemical compound at which no measurable toxic effect was observed for all measured indicators of cell health, as a level of toxicity for the chemical compound.

Claim 13, line 3, the term "CYQUANT®" has been replaced by the term "DNA binding".

Claims 28-38 have been canceled.

2. Claim 1 is directed to an allowable generic claim. Pursuant to the procedures set forth in the Official Gazette notice dated March 26, 1996 (1184 O.G. 86), claims 12-19, directed to various species, previously withdrawn from consideration as a result of a restriction requirement, are now subject to being rejoined.
